Marines Field StrikeLink System  
Akin Congratulates Stauder Technologies of St. Peters

Washington, DC- Congressman Todd Akin (R-MO) a member of the House Armed Services Committee, today congratulated Stauder Technologies of St. Peters for receiving a final fielding decision from the Marine Corp for its StrikeLink system. During a recent visit to Stauder, Akin received a briefing on StrikeLink.

On 1 June 2006 Marine Corps Systems Command finalized its decision to field StrikeLink, a target acquisition and hand-off system that was developed for the Marine Corps by Stauder Technologies. The system is used by forward observers and forward air controllers in their execution of artillery and close air support missions respectfully.

"After six years of development and testing, I am pleased to see Stauder Technologies rewarded for their hard work," said Akin. "StrikeLink's ability to precisely determine operator and target location will provide our Marines more confidence when calling for fire and close air support."

Stauder Technologies is a software development and systems integrator based in St. Peters, Missouri.
